

## **GeoMedia Desktop 2016 v16.2 patch (16.00.0000.20125)**

### **Instructions to install this patch:**

1. Exit all GeoMedia applications.
2. Ensure that GeoMedia Desktop 2016 v16.1 (16.00.0000.10267 or later) is installed.
3. Extract the .zip file to some temporary folder location.
4. Do one of the following:
  - a. Right-click on Update.exe and use the "Run as Administrator" option.
  - b. From an Administrator command prompt run "Update.exe /S /v/qn" for silent mode execution.
5. After the patch loads, run the GeoMedia Desktop Configuration Wizard to select one of three tiered packages; GeoMedia Essentials, GeoMedia Advantage or GeoMedia Professional, based on licensed product purchased and complete the installation.

This release is an incremental install on top of the full install of v16.1. It requires access to the original 16.1 installation media while installing.

### **Prerequisites:**

- GeoMedia Desktop 16.1 (16.00.0000.10267 or later)
- .NET Framework 4.5.1 Full Profile

Once the product is downloaded, a run-time license is required.

### **Fixes include:**

- ExportToMstnV8Service does not write the correct linkage type. IG-9736

### **Important Note:**

This patch is not compatible with language packs created for prior versions of the software. Once the patch is installed, the GeoMedia Desktop Configuration Wizard will run and will offer only English as a language choice. You may revert the patch and return to use of your language pack of choice by running the Hexagon Geospatial Setup Manager, selecting the "Update" entry present in the Installed Software list, and clicking Remove.
